01

# Navigation Map

Primary screen flow and bottom-navigation relationships

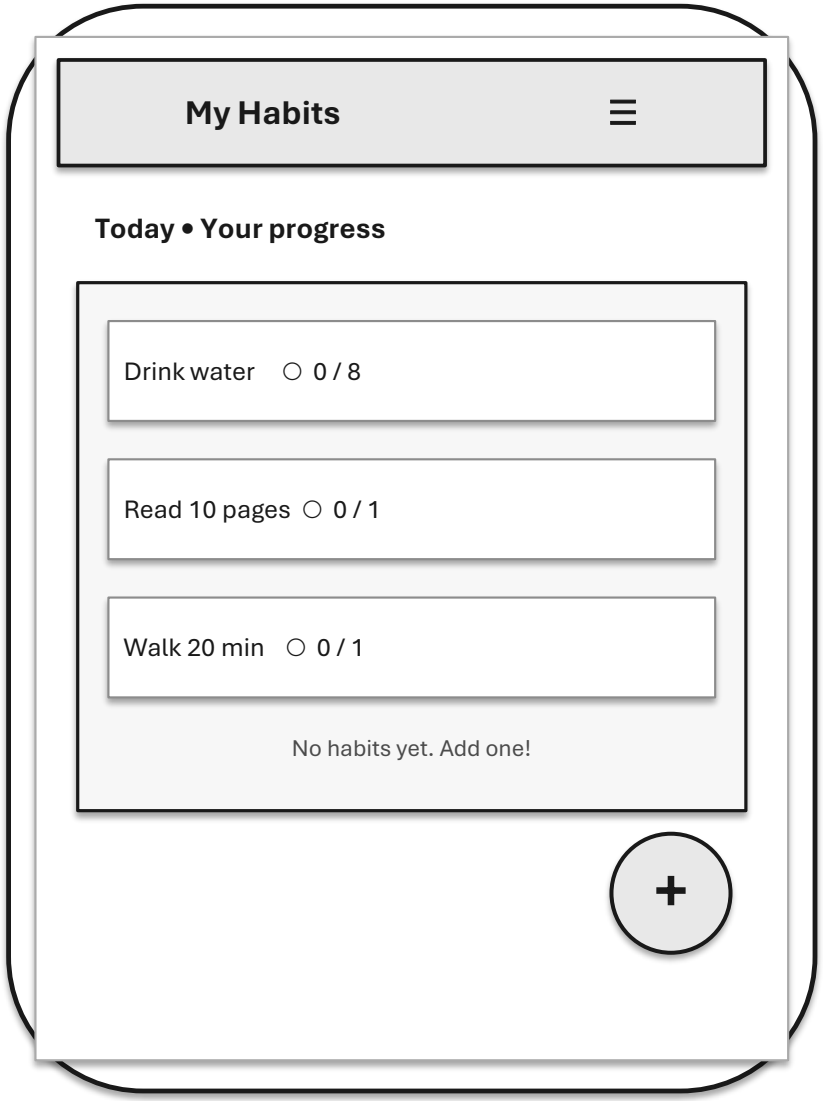

Flow: Dashboard → Editor (add) | Dashboard → Details (select) | Dashboard ↔ History ↔ Settings via bottom navigation

02

# Screen 1 — Dashboard

Lo-fi wireframe • habit overview and primary entry points

## Interactions & edge cases

**INTERACTION**

Tap a habit row to open Habit Details. Tap the + floating action button to open Habit Editor.

**EMPTY STATE**

When the user has no habits, replace the sample rows with the centered message: “No habits yet. Add one!”

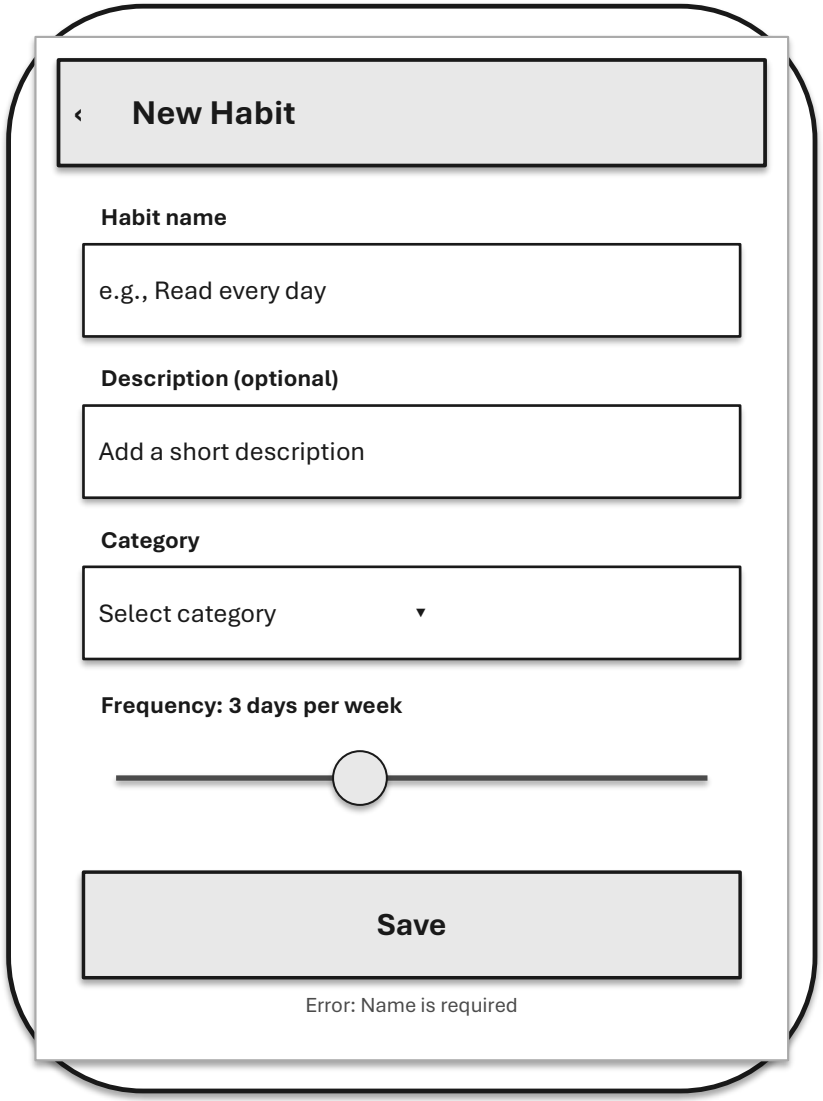

**DELETE**

Long-press or swipe a habit row to reveal Delete, then show a confirmation dialog before removing it.

03

# Screen 2 — Habit Editor

Lo-fi wireframe • create a new habit or update an existing one

## Interactions & edge cases

**INTERACTION**

Type a habit name and optional description, choose a category from the dropdown, adjust frequency with the slider, then tap Save.

**VALIDATION**

If the name is empty, show an error message directly under the name field: “Name is required.”

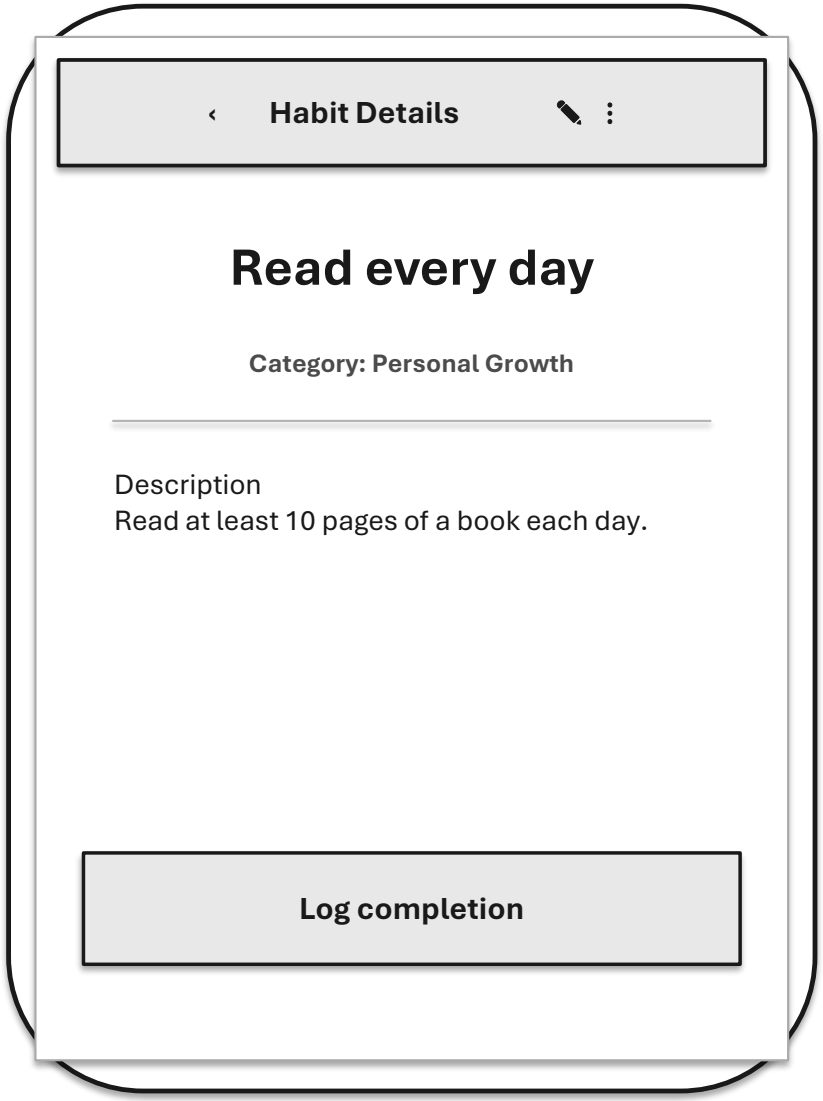

**EDIT MODE**

When editing an existing habit, pre-fill all saved values and change the primary button label from “Save” to “Update”.

04

# Screen 3 — Habit Details

Lo-fi wireframe • inspect, edit, remove, or log a habit

## Interactions & edge cases

**INTERACTION**

Tap Edit (pencil) to open Habit Editor with values pre-filled. Tap Delete (more menu) to start the removal flow. Tap “Log completion” to record today's completion.

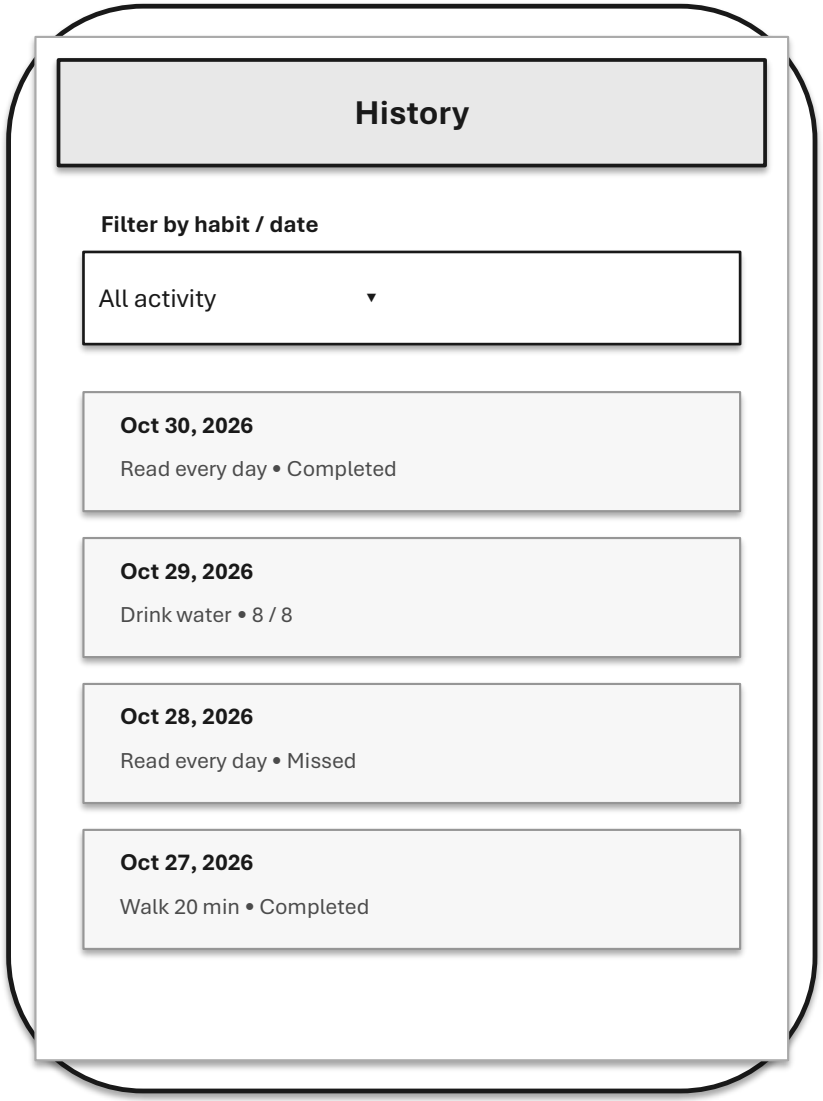

**DELETE CONFIRMATION**

Before deletion, show a modal dialog with the exact warning: “Are you sure? This deletes all history.” Provide Cancel and Delete actions.

05

# Screen 4 — History (Rob's screen)

Lo-fi wireframe • review past habit activity and filter the timeline

## Interaction

**FILTER**

The user selects a filter from the dropdown to narrow the history list. The displayed rows update to match the selected habit, date range, or activity type.

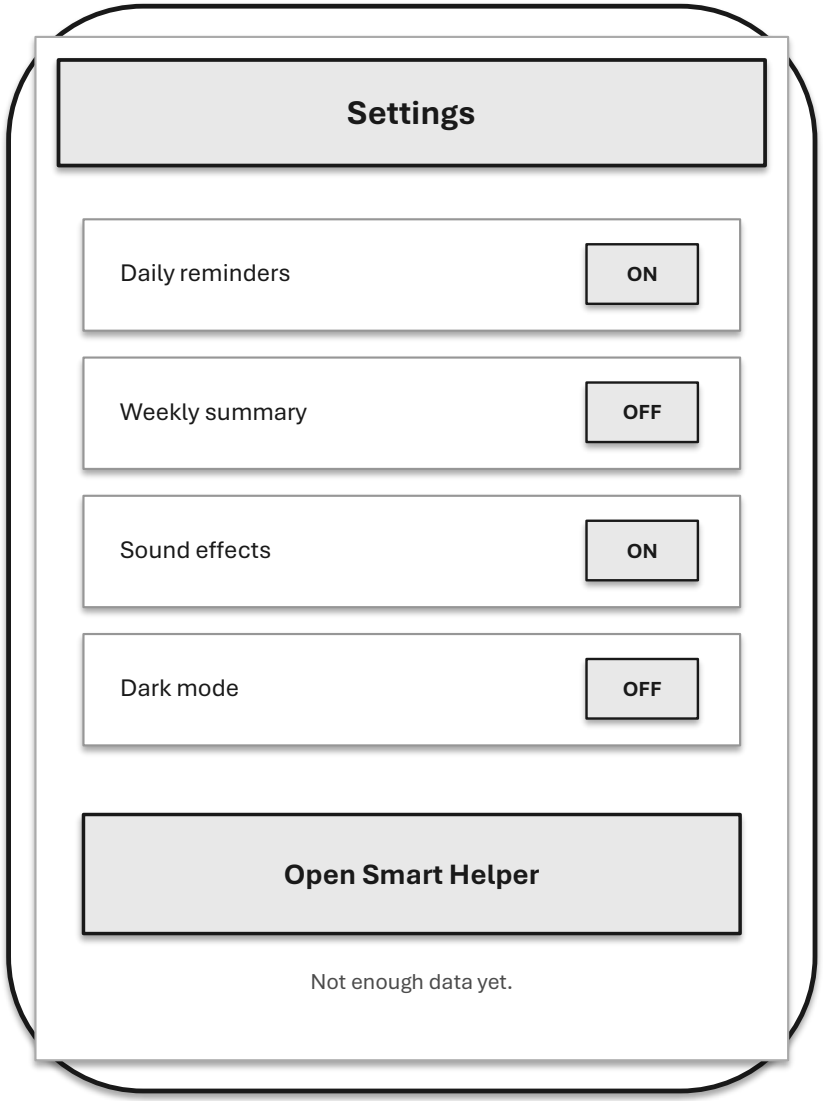

**HISTORY ROWS**

Each row shows the activity date, habit name, and a short completion status or note. Keep the list readable when there are many records.

06

# Screen 5 — Settings (Rob's screen)

Lo-fi wireframe • preferences and Smart Helper entry point

## Interactions & edge cases

**SETTINGS**

Each toggle changes its preference and persists the value using SharedPreferences, so the choice remains after the app is closed and reopened.

**SMART HELPER**

Tap “Open Smart Helper” to display the Smart Helper card with personalized guidance based on available habit data.

**INSUFFICIENT DATA**

If there is not enough activity data to generate useful guidance, show: “Not enough data yet.”
